In order to investigate whether bone metabolism is influenced by adrenal steroids in healthy children, we measured plasma concentrations of osteocalcin, bone alkaline phosphatase, and plasma glucocorticoid hormones and androgen metabolites in the serum and urine of normal boys (n = 18) aged 6-11 years. We compared the values with those in girls of the same age (n = 18). In boys, plasma osteocalcin and alkaline phosphatase levels were in the normal range. Plasma adrenal corticosterone, androstenedione, DHEA and DHEA-S levels were in the range of normal female values, but plasma dehydroepiandrosterone (DHEA) sulfate levels were a1d647c40b
