The AutoCAD 2D drawing objects are called the "Document Component Model". They are used to represent the 2D drawing objects, as well as to render them to the screen. There are three main Document Components: a Dpoint, a Dline, and a Dpicture. The Dpoint represents a vertex in a polyline, a point, or an arc. The Dline represents a linear segment, such as an edge or line. The Dpicture represents a closed region, such as a circle, ellipse, polyline, or polygon. AutoCAD has built-in command components, which are used to perform tasks such as changing the text of a block, moving a component, changing the stroke of a line, or creating a new component. These components are part of the Drawing Toolbar. Some command components are available for use in all views, while others are only available in a particular view. The Document Manager, which allows a user to change the storage location of a drawing file. AutoCAD's Python scripting support is built into the application. It allows users to create macros which automate repetitive tasks such as creating a drawing from an Excel spreadsheet. Users can also create objects, add them to the drawing, and then apply a command. Using the Python scripting interface, users can automate the drawing of objects or do other things that are not easily or efficiently done using

AutoCAD's mouse-driven interface. AutoCAD has a reverse engineering system to allow developers to add AutoCAD functionality to their own applications. The components of AutoCAD can be reverse engineered, and then the code used to make the existing functionality is added to an external application. This can be done for all the various APIs used in AutoCAD, including the ones used for the built-in command components. New in AutoCAD 2008 AutoCAD 2008 introduced a 'Star' mode, where changes to a drawing are detected and automatically applied to the whole drawing. This allows the user to correct their drawing in a more efficient manner. Star mode is also used to manage different versions of the same drawing, or keep a consistent version of a drawing when working with other people. A related feature is the 'Sync' command, which synchronizes the drawing and changes from different users. 'Sync' is also used to keep the same version of a drawing when working with other people.
